

WATERTRONICS[®]
INNOVATIVE PUMPING SOLUTIONS

LOW PROFILE **BLACKMAX™**

MAXIMUM PERFORMANCE,
MINIMUM VISIBILITY

Watertronics low profile BlackMax™ offers a simple, robust solution to your pumping needs while being as nonintrusive as possible.

Simplified Installation

The low profile BlackMax™ series pump systems are placed directly into the source water and require no wet well or large exterior pump station.

Robust Construction

The low profile BlackMax™ sled body is constructed from fusion bonded high density polyethylene (HDPE) that will never corrode, crack, or shatter.

Enhanced Screen Surface Area

By incorporating a large filtration screen area the water velocity through the screens is kept to a minimum allowing debris to fall away naturally.

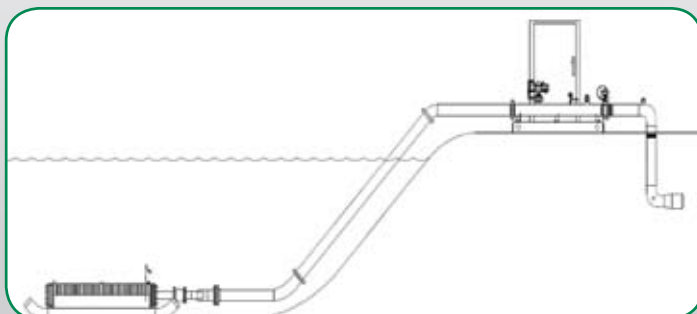

The screen is also coated with a PTFE enhanced biocide to inhibit organic fouling.

Quiet Operation

By confining the pumps and motors under water within the sled body there is minimal noise pollution.

*Duplex Low Profile
BlackMax™ with optional
installation floats*

Low profile sled installation

- Non-corrosive materials
- Fusion bonded HDPE construction
- Shallow water operation
- Large screen area
- Integrated PTFE enhance biocide
- Quiet underwater operation
- Capabilities from 50 to 3000 gpm
